

'Energy and Water Conservation Expo 2009' to be held on June 2009

April 08 - 2009

Under the patronage of H.E Eng. Fahmi bin Ali Al Jowder, the Minister of works and Minister in charge of Electricity and Water Authority, Kingdom of Bahrain, the Electricity and Water Authority in association with Bahrain society of Engineers and with the support of National Oil and Gas Authority are once again organizing the 'Energy and Water Conservation Expo 2009' to be held on 15-17 June 2009 at the Bahrain International Exhibition Center.

The Chairman of this Expo 2009 Mr. Adnan Fakhro, Vice Chief Executive of the Electricity & Water Authority said that the previous expo held on June 2008 was received an overwhelming response from the participated exhibitors and visitors to organize such an event.

Considering the good response, the expo committee is planning to organize this event every year. The aim of this expo is to create awareness about the importance of electricity and water conservation in the mind of all the categories of customers consisting of commercial, industrial & residential customers. Visitors will be able to witness the display of energy efficient products related to thermal insulation materials used in buildings and equipments for the industry, air-conditioning, lighting in addition to Energy & Water management technology.

Technical Papers will be presented during the two days technical sessions due to be conducted in conjunction with the exhibition. Topics for technical presentations are 'Energy & Water Conservation' measures & its implementation in commercial & industrial premises, Performance improvement in air-conditioning system, high performance electrical appliance and equipments, any innovative development in energy & water conservation, sustainable building design, high performance glazing and Thermal insulation materials for buildings.

Bahrain Bay is the Diamond Sponsor of Expo 2009. In addition the Bahrain Petroleum Company and Dalkia Bahrain are the Gold Sponsors and taking an active role in the exhibition.

During the three days of this event, companies will display their energy efficient products related to thermal insulation, air-conditioning and lighting in additional to energy and water management technology.

Engineering consultants will showcase their innovative building design and practices which will help in reducing the electricity consumption in buildings to a great extent.

This gathering will ensure a high level audience consisting of senior government representatives, private sector participants, experts in the fields of electricity and water conservation and companies marketing and promoting products related to conservation of electricity and water.
