Points

LEED ONLINE V3 - HIGHLIGHTS

- Faster, smarter, better user experience.
- Scalable and more robust.
- Improved design and more intuitive user interface.
- Greater help capabilities.
- Better communication between project teams and certifying bodies.
- Upgrades that respond to the changes in the LEED 2009 Rating Systems.
- More functionality.
- Improved reliability.

SS Credit 2: Development Density & Community Connectivity

(Responsible Individual) (Company Name)
I, , from

verify that the information provided below is accurate, to the best of my knowledge.

CREDIT COMPLIANCE

Please complete the project information listed below:

Project Site Area (sf)

Gross Building Area (sf)

Please select the appropriate compliance path option:

Option 1: Development Density

Option 2: Community Connectivity

OPTION 1: DEVELOPMENT DENSITY

Please ensure that the density radius and surrounding properties are clearly designated on the project's uploaded site vicinity plan.

Supporting Documentation

The site vicinity plan has been uploaded. The drawing includes a scale, density radius, and identifies all the neighborhood property locations within and intersected by the density boundary.

Sheet Description Log

Please include sheet name, sheet number and file name for each uploaded, referenced drawing (e.g. A-101_Site Plan_citenlan.pdf)

CERTIFICATION PROCESS: COMMERCIAL

Start

- Assessment of value
- Evaluation/documentation of condition treatment recommendations
- Set goals
- Determine preliminary LEED score
- Register project
- Identify partners
- Apply for incentives
- Determine green building practices
- Begin documentation process

Design

- Assemble design phase documentation
- Submit documentation
- USGBC design phase review
- “Anticipated” or “Denied”

Construction

- Assemble documentation
- Submit documentation
- USGBC construction phase review
- “Achieved” or “Denied”

Certification

CERTIFICATION TOOLS

- Rating systems
- Reference guides
- LEED-Online
- Credit Interpretation Rulings (CIRs)

The screenshot shows the USGBC website homepage. At the top is the USGBC logo and a navigation menu with links for LEED, Education, Resources, News & Events, and a partially visible 'C'. The main heading is 'Welcome to USGBC'. Below it is a paragraph: 'The U.S. Green Building Council is a 501(c)(3) non-profit community of leaders working to make green buildings available to everyone within a generation. This is the place to:'. A list of services follows: '» Certify your green building', '» Join USGBC as an organization', '» Join a chapter as an individual', '» Sign up for courses and workshops', '» Purchase LEED Reference Guides', '» Register for Greenbuild', '» Sign up for e-newsletters', and '» Become a LEED AP'. On the right side, there is a 'GREEN BUILDING' banner with 'GREEN LE' and 'Introducing'. Below that is a 'Highlights' section with the text 'USGBC's Strate'.

CREDIT CATEGORY SYNERGIES & INTEGRATIVE DESIGN

WATER EFFICIENCY

- Goals
 - Reduce the quantity of water needed for the building
 - Reduce municipal water supply and treatment burden
 - Eliminate the use of Potable Water for landscape irrigation
 - Eliminate the use for Potable Water for Process

Ramboda Falls, Sri Lanka

WATER EFFICIENCY

1 Prerequisite

- Water Use Reduction

*10 Possible Credit Points for LEED NC
and LEED CS, 11 Possible Points
for LEED Schools*

- Water Efficient Landscaping
- Innovative Wastewater Technologies
- Water Use Reduction
- Process Water Use Reduction (LEED Schools only)

WATER EFFICIENCY PREREQUISITE 1

Intent:

Increase water efficiency. Reduce burden on municipal water supply and wastewater systems.

Requirement:

Use 20% less water than calculated baseline. Calculation does not include irrigation and is based on the following;

Commercial Fixtures, Fittings, and Appliances	Current Baseline
Commercial toilets	1.6 gallons per flush (gpf)* Except blow-out fixtures: 3.5 (gpf)
Commercial urinals	1.0 (gpf)
Commercial lavatory (restroom) faucets	2.2 gallons per minute (gpm) at 60 pounds per square inch (psi), private applications only (hotel or motel guest rooms, hospital patient rooms) 0.5 (gpm) at 60 (psi)** all others except private applications 0.25 gallons per cycle for metering faucets
Commercial prerinse spray valves (for food service applications)	Flow rate \leq 1.6 (gpm) (no pressure specified; no performance requirement)
Residential Fixtures, Fittings, and Appliances	Current Baseline
Residential toilets	1.6 (gpf)***
Residential lavatory (bathroom) faucets	2.2 (gpm) at 60 psi
Residential kitchen faucet	
Residential showerheads	2.5 (gpm) at 80 (psi) per shower stall****
<p>* EPA 1992 standard for toilets applies to both commercial and residential models.</p> <p>** In addition to EPA requirements, the American Society of Mechanical Engineers standard for public lavatory faucets is 0.5 gpm at 60 psi (ASME A112.18.1-2005). This maximum has been incorporated into the national Uniform Plumbing Code and the International Plumbing Code.</p> <p>*** EPA 1992 standard for toilets applies to both commercial and residential models.</p> <p>**** Residential shower compartment (stall) in dwelling units: The total allowable flow rate from all flowing showerheads at any given time, including rain systems, waterfalls, bodysprays, bodyspas and jets, must be limited to the allowable showerhead flow rate as specified above (2.5 gpm) per shower compartment, where the floor area of the shower compartment is less than 2,500 square inches. For each increment of 2,500 square inches of floor area thereafter or part thereof, an additional showerhead with total allowable flow rate from all flowing devices equal to or less than the allowable flow rate as specified above must be allowed. Exception: Showers that emit recirculated nonpotable water originating from within the shower compartment while operating are allowed to exceed the maximum as long as the total potable water flow does not exceed the flow rate as specified above.</p>	

WATER EFFICIENCY PREREQUISITE 1

Benefits and Issues to Consider:

- Reduces water withdrawal from natural water bodies
- Protects the natural water cycle
- Reduces capital investment required for water supply and wastewater treatment infrastructure.
- Reduces chemical input, energy usage and greenhouse gas emissions associated with the treatment and distribution of water.
- Reduces end use energy and energy related pollution associated with water heating.
- Reduces operating costs.

Referenced Standards:

- Energy Policy Act (EPAAct) of 1992 (and as amended)
- Energy Policy Act (EPAAct) of 2005
- Uniform Plumbing Code (UPC) 2006
- International Plumbing Code 2006

WATER EFFICIENCY PREREQUISITE 1

Implementation Strategies:

- Flow restrictors and / or reduced flow aerators
- Automatic faucet sensors and metering controls
- Low consumption flush fixtures
- Non water fixtures
- Rainwater harvesting
- Special use pot fillers
- High efficiency faucets
- Foot pedal operated faucets

Table 1. UPC and IPC Standards for Plumbing Fixture Water Use

Fixture	UPC and IPC Standards	EPA WaterSense Standards
Water closets (gallons per flush, gpf)	1.60	1.28
Urinals (gpf)	1.00	0.5 ^a
Showerheads (gallons per minute, gpm*)	2.50	1.5–2.0 ^b
Public lavatory faucets and aerators (gpm**)	0.5	
Private lavatory faucets and aerators (gpm**)	2.2	1.5
Public metering lavatory faucets (gallons per metering cycle)	0.25	
Kitchen and janitor sink faucets	2.20	
Metering faucets (gallons per cycle)	0.25	

*When measured at a flowing water pressure of 80 pounds per square inch (psi).

**When measured at a flowing water pressure of 60 pounds per square inch (psi).

^a On May 22, 2008, EPA issued a notification of intent to develop a specification for high-efficiency urinals. WaterSense anticipates establishing a maximum allowable flush volume of 0.5 gpf.

^b On August 30, 2007, EPA issued a notification of intent to develop a specification for showerheads. WaterSense anticipates establishing a single maximum flow rate between 1.5 gpm and 2.0 gmp.

WATER EFFICIENCY CREDIT 1

Intent:

Limit or eliminate potable or natural surface / subsurface water on or near site, for landscape irrigation.

Requirement:

Option 1 (2 points) – Reduce by 50% from a calculated midsummer baseline case.

Reduction to be attributed to a combination of;

- Plant species, density and microclimate factor
- Irrigation efficiency
- Use of captured rainwater
- Use of recycled wastewater
- Use of water treated and conveyed by a public agency specifically for non potable uses

Option 2 (4 points) – No potable water use or irrigation by meeting Option 1 **AND**,
Path 1 – Use only captured rainwater, recycled wastewater, recycled grey water or water treated and conveyed by a public agency specifically for non potable uses **OR**

Path 2 – Install landscaping that does not require permanent irrigation. Temporary irrigation is allowed if only for 1 year.

WATER EFFICIENCY CREDIT 1

Benefits and Issues to Consider:

- Improved landscaping reduces or eliminates irrigation needs.
- Native / adaptive plants fosters self sustaining landscape.
- Native / adaptive plants attract wildlife integrating the building with surroundings.
- Native / adaptive plants minimize water quality degradation through less fertilizer and pesticides.
- Water efficient landscaping conserves potable water resources.
- Climate sensitive landscaping avoids escalating water costs for irrigation.

Implementation Strategies:

- Climate tolerant plants
- Contour the land to make use of rainwater runoff
- Minimize turf grass area
- Mulching
- Composting
- Increase shade canopy
- Avoid monocultures
- Drip, micromist, subsurface irrigation systems
- Smart irrigation controllers – moisture / rain sensors
- Rainwater harvesting
- Recovered wastewater usage

WATER EFFICIENCY CREDIT 1

Rainwater Harvesting System - Example

Narrative, Design Case

Species used are adapted to arid conditions of Kuwait. Most trees and palms are part of mixed planting, with a few isolated ones at the west side of the project. Likewise, most shrubs and groundcover planting are part of mixed planting, except for isolated cases on the sheltered east side of the project bounded by the parking building. Mixed planting are further categorized into north, south, east and west because of the microclimate factors expected to impact on evapotranspiration (ET_o). Refer to attached PDF sheet illustrating planting design.

Refer to WEc1 Template

WATER EFFICIENCY CREDIT 2

Intent:

Reduce wastewater generation and potable water demand. Increase local aquifer recharge.

Requirement:

Option 1 – Reduce potable water use for sewage conveyance by 50% by,

- Use of water conserving fixtures OR
- Use of non potable water

Option 2 – Treat to tertiary standards and infiltrate or reuse on site, 50% of the wastewater generated.

WATER EFFICIENCY CREDIT 2

Benefits and Issues to Consider:

- Reduction of potable water for sewage conveyance reduces total water withdrawal from natural water bodies.
- Reduction of sewage volume reduces public infrastructure, chemical inputs, energy use and emissions at municipal water treatment plants.
- Wastes are converted into resources such as treated water for potable and non potable use and nutrients that improve soil conditions.
- Grey water recycling saves costs of procuring municipal water.
- Rainwater harvesting reduces municipal water demand and the need for storm water management systems.
- Water treatment through natural or constructed wetlands adds value through site enhancement.

Referenced Standards:

- Energy Policy Act (EPAAct) of 1992 (and as amended)
- Energy Policy Act (EPAAct) of 2005
- Uniform Plumbing Code (UPC) 2006
- International Plumbing Code 2006

WATER EFFICIENCY CREDIT 2

Calculations are based on;

- Annual generation of black water volumes from flush fixtures
- Fixture and fitting water consumption rate
- Estimated use by occupants

Occupancy types include;

- Full Time Equivalent (FTE) occupants
- Transient occupants
- Residents

Table 4. Sample Blackwater-Generating Fixtures and Fittings and Water Consumption

Flush fixture	Flow rate (gpf)
Conventional water closet	1.6
High-efficiency toilet (HET), single-flush gravity	1.28
HET, single-flush pressure assist	1.0
HET, dual flush (full-flush)	1.6
HET, dual flush (low-flush)	1.1
HET, foam flush	0.05
Non-water toilet	0.0
Conventional urinal	1.0
High-efficiency urinal (HEU)	0.5
Nonwater urinal	0.0

WATER EFFICIENCY CREDIT 2

On-site Biological Treatment of Wastewater - Example

Exemplary Performance:

- EITHER by 100% reduction of potable water for sewage conveyance OR
- By 100% onsite treatment and infiltration or reuse of generated waste water.

GUIDELINES TO ACHIEVE - TARGET 50% LESS

- Water Efficient Landscaping
 - No Potable Water Use
- Grey Water Treatment
- Storm Water Recovery
- Ultra Low Flow Fixtures
- 50% reduction of Potable Water for Sewage Conveyance
- No Potable Water for Process
- Condensate recovery

SUSTAINABLE WATER CONSUMPTION STRATEGIES

- Potable Water Reduction through High Efficiency Plumbing Fixtures

	Baseline	Design
▪ Low Flow Urinals	1gpf	0.1gpf
▪ Dual Flush Toilets	1.6gpf	1.5gpf / 1.1gpf
▪ Ultra Low Flow Lavatory Faucets	2.2gpm	0.8gpm
▪ Low Flow Showers	2.5gpm	1.5gpm
▪ Low Flow Kitchen Faucets	2.2gpm	2.2gpm
▪ Low Flow Janitor Sink Faucets	2.2gpm	2.2gpm

TERTIARY TREATMENT

- Tertiary Treatment is the highest form of wastewater treatment that includes the removal of nutrients, organic and solid material, along with biological or chemical polishing (generally to effluent limits of 10 mg/L BOD and 10 mg/L TSS).

An illustration of a Rain Harvesting System

Prepared by Paladino Consulting LLC

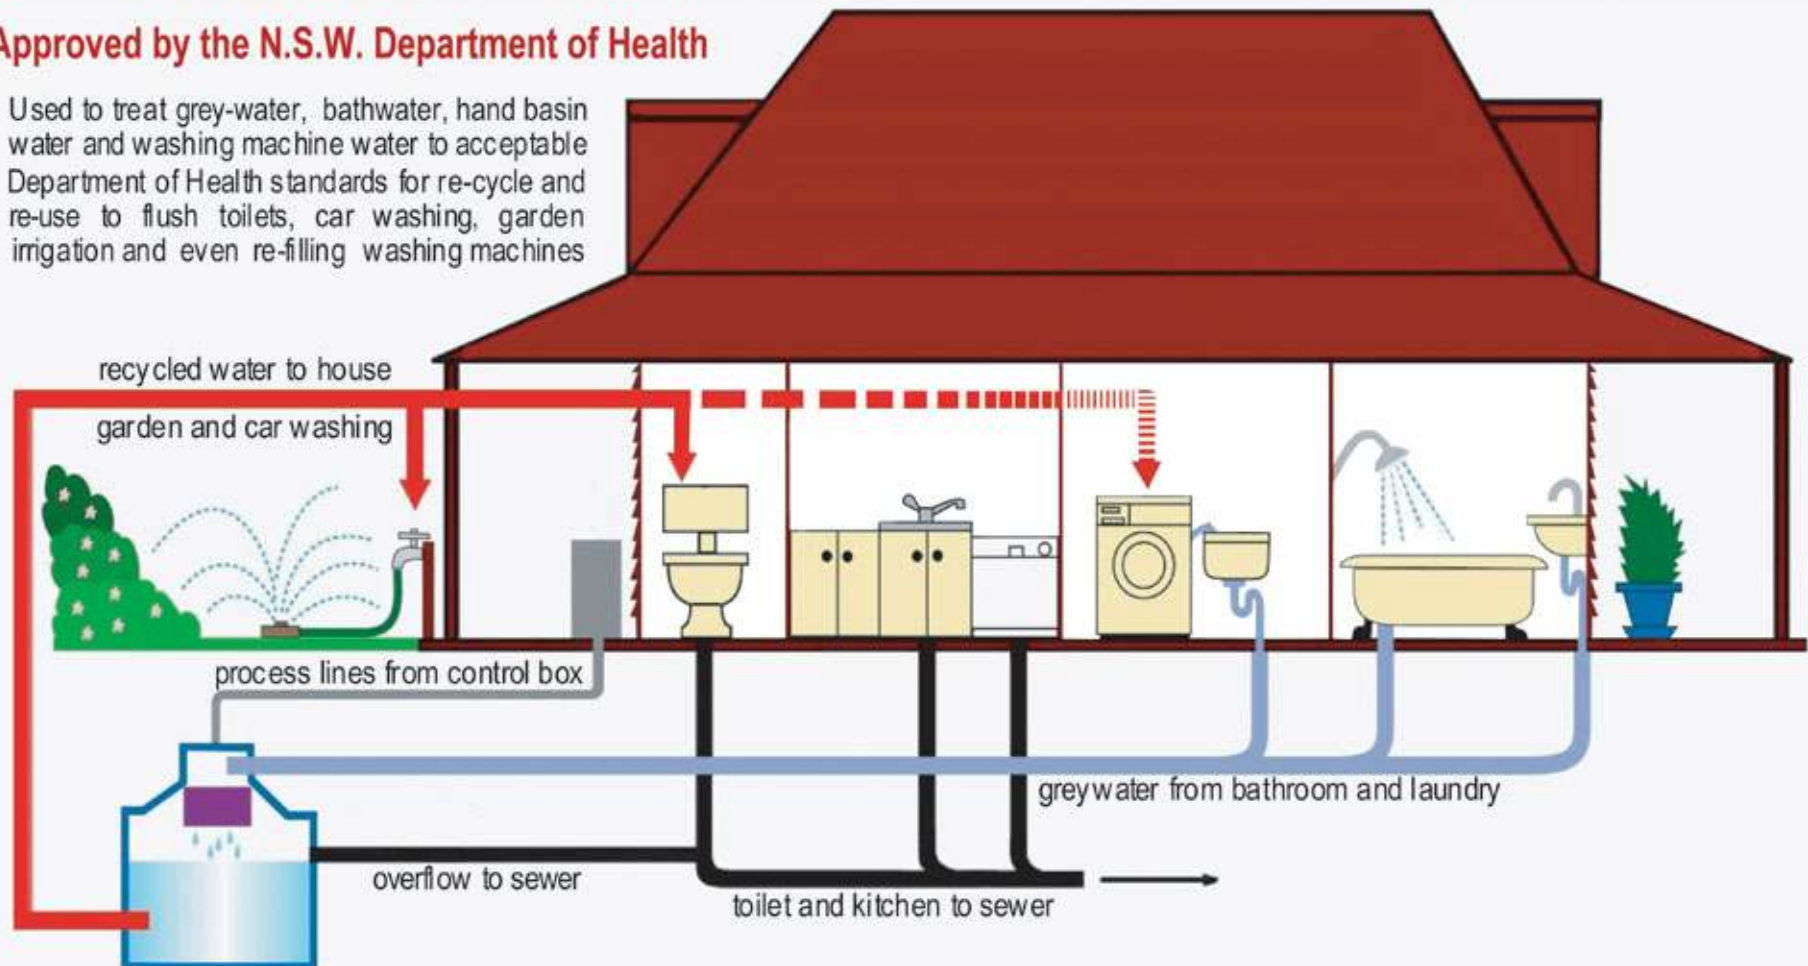

GREYWATER TREATMENT

Approved by the N.S.W. Department of Health

Used to treat grey-water, bathwater, hand basin water and washing machine water to acceptable Department of Health standards for re-cycle and re-use to flush toilets, car washing, garden irrigation and even re-filling washing machines

Baseline Case

Fixture Type	Daily Uses	Flowrate [GPF]	Occupants	Sewage Generation [gal]
Water Closet (Male)	1	1.6	150	240
Water Closet (Female)	3	1.6	150	720
Urinal (Male)	2	1.0	150	300
Urinal (Female)	0	1.0	150	0
Total Daily Volume [gal]				1,260
Annual Work Days				260
TOTAL ANNUAL VOLUME [gal]				327,600

Design Case

Fixture Type	Daily Uses	Flowrate [GPF]	Occupants	Sewage Generation [gal]
Low-Flow Water Closet (Male)	0	1.1	150	0
Low-Flow Water Closet (Female)	3	1.1	150	495

TOTAL ANNUAL VOLUME [gal]				92,700

Potable Water Savings = 71.7%

Refer to WEc2 Template

WATER EFFICIENCY CREDIT 3

Intent:

Further increase water efficiency. Reduce burden on municipal water supply and wastewater systems.

Requirement:

Use 30% (2 points), 35% (3 points), 40% (4 points) less water than calculated baseline. Calculation does not include irrigation and is based on the following;

Commercial Fixtures, Fittings, and Appliances	Current Baseline
Commercial toilets	1.6 gallons per flush (gpf)* Except blow-out fixtures: 3.5 (gpf)
Commercial urinals	1.0 (gpf)
Commercial lavatory (restroom) faucets	2.2 gallons per minute (gpm) at 60 pounds per square inch (psi), private applications only (hotel or motel guest rooms, hospital patient rooms) 0.5 (gpm) at 60 (psi)** all others except private applications 0.25 gallons per cycle for metering faucets
Commercial prerinse spray valves (for food service applications)	Flow rate \leq 1.6 (gpm) (no pressure specified; no performance requirement)
Residential Fixtures, Fittings, and Appliances	Current Baseline
Residential toilets	1.6 (gpf)***
Residential lavatory (bathroom) faucets	2.2 (gpm) at 60 psi
Residential kitchen faucet	
Residential showerheads	2.5 (gpm) at 80 (psi) per shower stall****
<p>* EPA 1992 standard for toilets applies to both commercial and residential models.</p> <p>** In addition to EPA requirements, the American Society of Mechanical Engineers standard for public lavatory faucets is 0.5 gpm at 60 psi (ASME A112.18.1-2005). This maximum has been incorporated into the national Uniform Plumbing Code and the International Plumbing Code.</p> <p>*** EPA 1992 standard for toilets applies to both commercial and residential models.</p> <p>**** Residential shower compartment (stall) in dwelling units: The total allowable flow rate from all flowing showerheads at any given time, including rain systems, waterfalls, bodysprays, bodyspas and jets, must be limited to the allowable showerhead flow rate as specified above (2.5 gpm) per shower compartment, where the floor area of the shower compartment is less than 2,500 square inches. For each increment of 2,500 square inches of floor area thereafter or part thereof, an additional showerhead with total allowable flow rate from all flowing devices equal to or less than the allowable flow rate as specified above must be allowed. Exception: Showers that emit recirculated nonpotable water originating from within the shower compartment while operating are allowed to exceed the maximum as long as the total potable water flow does not exceed the flow rate as specified above.</p>	

WATER EFFICIENCY CREDIT 3

Benefits and Issues to Consider:

- Reduces water withdrawal from natural water bodies
- Protects the natural water cycle
- Reduces capital investment required for water supply and wastewater treatment infrastructure.
- Reduces chemical input, energy usage and greenhouse gas emissions associated with the treatment and distribution of water.
- Reduces end use energy and energy related pollution associated with water heating.
- Reduces operating costs.

Referenced Standards:

- Energy Policy Act (EPAct) of 1992 (and as amended)
- Energy Policy Act (EPAct) of 2005
- Uniform Plumbing Code (UPC) 2006
- International Plumbing Code 2006

WATER EFFICIENCY CREDIT 3

Implementation Strategies:

- Flow restrictors and / or reduced flow aerators
- Automatic faucet sensors and metering controls
- Low consumption flush fixtures
- Non water fixtures
- Rainwater harvesting
- Special use pot fillers
- High efficiency faucets
- Foot pedal operated faucets

Table 1. UPC and IPC Standards for Plumbing Fixture Water Use

Fixture	UPC and IPC Standards	EPA WaterSense Standards
Water closets (gallons per flush, gpf)	1.60	1.28
Urinals (gpf)	1.00	0.5 ^a
Showerheads (gallons per minute, gpm*)	2.50	1.5–2.0 ^b
Public lavatory faucets and aerators (gpm**)	0.5	
Private lavatory faucets and aerators (gpm**)	2.2	1.5
Public metering lavatory faucets (gallons per metering cycle)	0.25	
Kitchen and janitor sink faucets	2.20	
Metering faucets (gallons per cycle)	0.25	

*When measured at a flowing water pressure of 80 pounds per square inch (psi).

**When measured at a flowing water pressure of 60 pounds per square inch (psi).

^a On May 22, 2008, EPA issued a notification of intent to develop a specification for high-efficiency urinals. WaterSense anticipates establishing a maximum allowable flush volume of 0.5 gpf.

^b On August 30, 2007, EPA issued a notification of intent to develop a specification for showerheads. WaterSense anticipates establishing a single maximum flow rate between 1.5 gpm and 2.0 gmp.

GUIDELINES TO ACHIEVE - TARGET 50% LESS

- Water Efficient Landscaping
 - No Potable Water Use
- Grey Water Treatment
- Storm Water Recovery
- Ultra Low Flow Fixtures
- 50% reduction of Potable Water for Sewage Conveyance
- No Potable Water for Process
- Condensate recovery

SUSTAINABLE WATER CONSUMPTION STRATEGIES

- Potable Water Reduction through High Efficiency Plumbing Fixtures

	Baseline	Design
▪ Low Flow Urinals	1gpf	0.1gpf
▪ Dual Flush Toilets	1.6gpf	1.5gpf / 1.1gpf
▪ Ultra Low Flow Lavatory Faucets	2.2gpm	0.8gpm
▪ Low Flow Showers	2.5gpm	1.5gpm
▪ Low Flow Kitchen Faucets	2.2gpm	2.2gpm
▪ Low Flow Janitor Sink Faucets	2.2gpm	2.2gpm

WATER EFFICIENT FIXTURES

Europlus E Infrared-Electronic basin mixer 1/2" without mixing device

battery supply
6V lithium-battery, type CR-P2
CE approved

WATER LESS URINALS

WATERFREE URINAL
VITREOUS CHINA
MOO #U1P5001

U1-P

FEATURES

- Touchless operation
- Mechanical free design
- Waterfree performance
- ADA compliant, 25.5" tall size urinal
- Available in white and colors

BENEFITS

- No water or sewer costs
- No costly valve repairs
- No flooding
- Break free maintenance
- Bids free, close environment
- Minimal size and easier cleaning
- Improved hygiene and safety

COMPANY: CITICORON, Inc. 4041 VESSE
217 FT 2nd FLOOR and 4111 (between MSY) St. Phoenix
China. Features. In compliance with USFWS 101 141 2008.

Falcon Waterfree urinals each save approximately 40,000 gallons per year, resulting in dramatically reduced water and sewer rates. Purchasing and installing Falcon Waterfree urinals is also much less expensive because flush valves, and the associated piping, are not required. Accordingly, maintenance costs associated with these valves are eliminated.

The Falcon Waterfree urinal incorporates smooth, aseptic surfaces, while eliminating corners and hard to clean areas. Flooding, clogging water and sanitation problems, associated with flush valves, are no longer an issue.

WATER EFFICIENT FIXTURES

Z5758

"The Retrofit Pint" 0.125 gpf Ultra Low Consumption Urinal System

Z5758 Series – "The Retrofit Pint"

- Zurn One ultra low consumption urinal system designed for optimal performance between Zurn fixture and Zurn flush valve to save water while exceeding industry performance standards.
- 1/8 gpf [0.5 Lpf]
- Over 85% water savings over standard 1.0 gpf [4.0 Lpf] system
- Pressure compensating internal flow regulator
- Oversized footprint to make retrofit easy
- Vitreous china
- High efficiency washout flushing action
- 3/4" top spud
- 2" I.P.S. outlet flange and rubber gasket with integral trap
- 14" extended rim height for handicap compliance when installed at proper height
- Shipping Weight: 72 lbs.

WATER EFFICIENT

Duofix mounting elements for wall-hung WC

Duofix element with UP320, front actuation **new**

Application Purpose

- For installation in front of a solid or drywall
- For installation in dry-wall or PreWall construction covered with panels (gypsum or wood)
- For installation in room-height preWall or partition wall
- For a floor construction of 0 - 20 cm
- For wall-hung WC with fastening distance 18 cm or 23 cm
- For installation in front of - or inside a solid wall

Characteristics

- Element height 112 cm
- Water supply connection at centre back or at the top
- Dual-flush with Sigma50, Sigma20, Samba, Twist or Bolero actuator plate
- Single flush with Sigma10 actuator plate
- Stop-and-go flush with Rumba, Mambo or Tango actuator plate
- Adjustable flushing volume
- Concealed cistern for tool-free mounting and repair work
- Tool-free fastening for outlet bend, sound-absorbing, adjustable in depth with 6 positions, adjustable range 45 mm
- Self-locking feet for tool-free alignment of the element
- Galvanized leg supports, adjustable from 0 - 20 cm, with detent mark
- Concealed cistern fully insulated against condensation
- Self-supporting
- Powder-coated, colour Geberit blue
- Rotating foot plate

Product Details

Factory setting	6 and 3 l
Flush range small	3 - 4 l
Flush range large	6/7.5 l
Interruptible flush-stop	6/7.5 l

Duofix Special element with UP700, front actuation, thickness 8cm **new**

Application Purpose

- For wall-hung WC with fastening distance 18 cm or 23 cm
- For a floor construction of 0 - 12 cm
- For installation in front of a solid or drywall
- For installation in dry-wall or PreWall construction covered with panels (gypsum or wood)
- For installation in room-height preWall or partition wall
- For installation in front of - or inside a solid wall

Characteristics

- Self-supporting
- Element height 112 cm
- M12 fastening for ceramic appliances, fastening distance 18 cm or 23 cm
- Concealed cistern fully insulated against condensation
- Installation depth 8 cm
- Water supply connection at the top
- Stop-and-go flush with actuator plate Rumba, Mambo or Tango
- Single flush with Sigma10 actuator plate
- Dual-flush with Sigma50, Sigma20, Samba, Twist or Bolero actuator plate
- Adjustable flushing volume
- Fastening for outlet bend adjustable in depth and sound-absorbing
- Powder-coated, colour Geberit blue
- Feet galvanized, adjustable 0-12 cm
- Self-locking feet for tool-free alignment of the element

Product Details

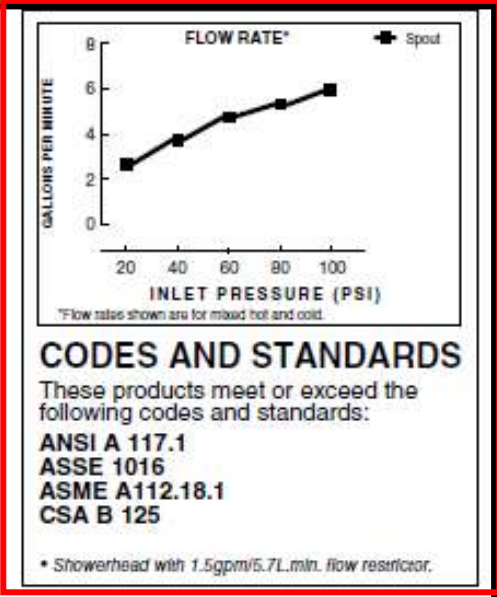

Factory setting	6 and 3 l
Flush volume small	3 l
Flush range large	6/9 l
Interruptible flush-stop	6/9 l
