

Big Fans wows crowd at Big 5 Exhibition

November 30 - 2008

Big Fans the world's leading manufacturer of HVLS (High Volume Low Speed) fans has recently announced their successful participation at the Big 5 exhibition at Dubai World Trade Center, displaying the world's largest cooling fan.

Recently launched in the middle east market the 'Big Vertical Fan' on display outside Hall 1, is designed to cool large spaces such as concerts or shows, outdoor entertainment venues, athletic and sporting arenas, large private gardens, construction sites, dairy etc. The aerodynamic design of the Big Fans blades allows them to move vast amounts of air slowly and very efficiently. A Big Vertical Fan could substitute the need to put 30+ little pedestal fans. The low energy usage of the fans makes them ideal to run throughout the day.

'We had an amazing response at the show, interest ranging from fans to be used for special effects in a soon to be opened themed island, to cooling large construction sites, factories, workshops, for labour relief during the hottest months of the year,'

said Hemal Shah, director of Logistixware, Middle East partner of Big Fans.

Big Fans products due to their energy efficiency nature are eligible for LEED points from the US Green Building Council.

Big Fans has over 35,000 fans spinning worldwide and growing. Big Fans has won several awards for product innovation and is one of the fastest growing private companies in America.
